Table of Contents

1. Outline

- CCD line scan camera with 4096 pixels of image sensor and of 50MHz data rate.
- Video signal is output complying with Camera Link standard (Base Configuration).

2. Features

- It can perform high-speed inspection with 4096 image pixels at 50MHz data rate.
- GAIN and OFFSET characteristics, 8/10 bit format etc. can be easily changed with RS232C command from capture board.
- The equipment operates with a single DC12V power source.
- Reduction in size and weight has been realized by adopting original circuit and mechanism design.
- Since the output signal level hardly vary among the ODD and EVEN pixels, It can display crisp image.
- Exposure control function is incorporated.

3. Applications

- Image processing device for Image inspection.
- Foreign substance detector on high-speed production line
- Surface inspection apparatus of sheet-like object .
- Pinhole detector

4. CCD image sensor

The CCD image sensor Is characterized by 10μm square sized pixel, effective 4096 pixels, and high-speed and high-sensitivity characteristic features.
Charges accumulated in single-row photo diodes are output thorough two shift registers, respectively. (No.1 for ODD numbered charges, No.2 for EVEN numbered charges) Each shift register operates at the rate of 25MHz.

Block diagram of CCD device

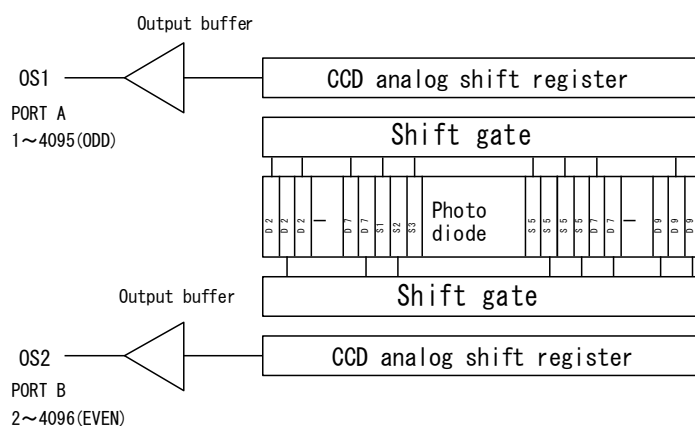

Spectral responsivity
5. Specifications

Number of pixels	4096
Unit cell size	10μ m×10μ m
Photo array length	40.96 mm
Data rate	50 MHz
Scan rate (scan/sec)	11.9 kHz Max.
Line transfer pulse input	84 μ sec
Video output (Digital output)	Base Configuration 2×8/10 bit
Sensitivity	50 V/lx. sec
Saturated exposure amount	1.3 lx. sec
Output ununiformity	3% standard at 50% of saturation output（on the element）
Power supply	＋12V ±0.5V （650mA）
Operational ambient temperature	0 ～ +40℃ （Shall be free from dew condensation and frost.）
Operational humidity range	85% MAX
Storage temperature range	−10℃ ～ ＋65℃
Weight	360g or less
External dimension (mm)	64(W)×64(H)×80.3(D)
lens mount	Nicon F mount（standard） Asahi K mount（optional）

7. How to change settings

The ODD/EVEN video signal gain and the camera gain are changeable as needed by removing the camera cover,.

7-1　Fine adjustment of ODD/EVEN video signal gain

Gain adjustment of ODD/EVEN video signal is not normally needed, as it has been set before shipment.
However, when it is needed, make a fine adjustment following the diagram below.

Fine adjustment of EVEN video signal
VR1: Pixel No.2 to 4096 (EVEN number)
　　　Fine control volume for gain

7-2　How to change camera GAIN

The camera gain has been set to "×4" as a factory default.
It can double the gain using the built-in GAIN switch.
Select "×1" when high-quality image is needed, and select "×8" when high sensitivity is needed even if image quality degrades.　Select "×2 to ×6" depending on the degree.

OFF　　ON

9. Serial communication protocol

Operation under the RS232C communication

(1) Selection of output bit format   8/10 bit

(2) SYNC system switching

    AUTO   When EXT SYNC is not designated, it automatically switches to INT SYNC.

    EXT.SYNC   EXT. SYNC operation only

    INT. SYNC   INT. SYNC operation only

    ※SYNC period is determined from the following equation.

    SYNC period = Minimum period + n × a

    Where

    Internal sync(sync=2)   n= expt (exposure time)

    a= 12.8μsec TL-5150UCL

        10.24μsec ..... ⎰ TL-1024UCL

                     TL-4096UCL
                     TL-7400UCL
                     TL-7400RCL
                     TL-7450UCL

(3) Exposure control system switching (Refer to the time chart on P.12)
    Line period exposure   Exposure during periodic time
    Fixed time exposure   Exposure during pre-set time
    Pulse width exposure   Exposure during the pulse width of EXT.SYNC

(4) GAIN switching
    Selection of GAIN position   1,2,3,…………8 ×
    Selection of GAIN position for each channel   ODD/EVEN adjustment

(5) Adjustment of OFFSET
    OFFSET adjustment for each channel (ODD/EVEN)

[Network transmission setting]

Baud rate	:9600bps
Data Length	:8bit
Start Bit	:1bit
Stop Bit	:1bit
Parity	:Non
Xon / Xoff Control	:Non

[Communication overall]
1. Viewing

    To view the status of the camera.

    e.g. Id? <CR>   To view the camera ID.

2. Setting

    To set the status of the camera.

    e.g. sync=1 <CR>   To set SYNC system to EXT.SYNC

[Glossary]
```
[   ]          ……omissible
<CR>          ……carriage return
N             ……arbitrary numeral indicating some value
A             ……arbitrary numeral indicating GAIN position
X             ……arbitrary numeral indicating channel
Gain position……GAIN position of the camera
Channel       …….Channel to specify the GAIN control device for each CCD output line
EEPROM       …….EEPROM incorporated in the camera
```

[Notes]
・Command name must be lower-case. Upper-case character is not valid.
・Input character must be one-byte character. Double-byte character is not valid.
・Blank is not valid.
・Line feed code is indicated by "CR(0x0D)". And also "LF(0×0A)" and "CR+LF" are usable.
  However returning line feed code must be CR only.

<When in use of Hyper terminal>
・Retyping is required in case of inputting error .(Correction by cursor movement is not valid.)

[Description of exceptional case]

 * NG is returned when in command input error or in inputting nonexistent command.

  e.g. : Command input error (Gain position No. is not designated.)

    Input: ch1gain=96

    Output: NG

  e.g. : Input of nonexistent command

    Input: chake

    Output: NG

 * NE is returned when in numeric entry error.

  e.g. : Input error (Input value is beyond the setting range.)

    Input: gainpos=96

    Output: NE

  e.g. : Input error (Input value is beyond the setting range.)

    Input: ch1gain1=2000

    Output: NE

 * NC is returned when in inputting invalid value under the condition that the ctrl setting (DIP-SW setting) is 0.

  e.g. :

    Input: ch1gain=9   (at ctrl=0)

    Output: NC

 * TO is returned when a command input period overruns the time-out period (15 sec.).

  e.g. :

    Input: gainpo   (No CR entry)

    Output: TO

 * ” ? ” at the bottom of Command is omissible

 e.g. :

    Input: id

    Output: 0

【Command Protocol】(PC→Camera)

| No	Command Name	Format	Argument	Return value	Explanantion
	Communication				
1	Check	check<CR>	Non	OK	Command for communication test
	Camera setting				
2	Ctrl (view)	ctrl[?]<CR>	Non	0:Dip Switch 1:Com	View the effective state of Communication setting value/DIP SW.
3	Ctrl (set)	ctrl=N<CR>	N=0:Dip Sw N=1:Com	OK	Set the effective state of Communication setting value/DIP SW.
4	Dip Sw (view)	dipsw<CR>	Non	0～255	View the state of DIP SW Return the state of DIP SW in decimal number
	User ID				
5	ID (view)	id[?]<CR>	Non	ID(default:0)	View the camera ID. Administrative use for plural cameras. For user's operation.
6	ID (set)	id=N<CR>	N:0～255	OK	Set the camera ID. Administrative use for plural cameras. For user's operation.
	Output bit				
7	Output bit (view)	bit[?]<CR>	Non	8: 8bit(default) 10: 10bit	View the output bit format of the camera.
8	Output bit (set)	bit=N<CR>	N= 8 : 8bit N=10 : 10bit	OK	Set the output bit format of the camera. *Settable only at ctrl=1.
	SYNC switching				
9	Sync (view).	sync[?]<CR>	Non	0:Auto 1:Ext Sync 2:Int Sync 3.ExtSync & Anti Blooming	View the state of SYNC mode. *Effective value only at ctrl=1.
10	Sync (set)	sync=N<CR>	0:Auto 1:Ext Sync 2:Int Sync 3.ExtSync & Anti Blooming	OK	Set the SYNC mode. *Settable only at ctrl=1.
	Exposure control				
11	Exposure control (view)	expc[?]<CR>	Non	0:Line period exposure 1:Fixed time exposure 2:Pulse width exposure	View the exposure control state of the camera. *Effective value only at ctrl=1.
12	Exposure control (set)	expc=N<CR>	0:Line period exposure 1:Fixed time exposure 2:Pulse width exposure	OK	Set the exposure control state of the camera. *Settable only at ctrl=1.
	Exposure time				
13	Exposure time	expt[?]<CR>	Non	0～255:Exposure time	View the period at Fixed time exposure mode. *Effective value only at ctrl=1
14	Exposure time	expt=N<CR>	N=0～255:Exposure time	OK	Set the period at Fixed time exposure mode. *Settable only at ctrl=1
	Gain				
15	Gain Position (view)	gainpos[?]<CR>	Non	1～8:gain position	View the Gain position of the camera. *Effective value only at ctrl=1
16	Gain Position (set)	gainpos=A<CR>	A=1～8:gain position	OK	Set the Gain position of the camera. *Settable only at ctrl=1
17	chXgainA (view)	chXgainA[?]<CR>	X=1～4:ch A=1～8:gain position	0～255:gain level	View the Gain value fow each Gain position of each channel.
18	chXgainA (set)	chXgainA=N<CR>	X=1～4:ch A=1～8:gain position N=0～255:gain level	OK	Set the Gain value fow each Gain position of each channel. *Settable only at ctrl=1
	Offset				
19	chXoffset (view)	chXoffset[?]<CR>	X=1～4:ch	0～31:offset level	View the offset value of each channel.
20	chXoffset (set)	chXoffset=N<CR>	X=1～4:ch N=0～31:offset level	OK	Set the offset value of each channel. *Settable only at ctrl=1
	Channel				
21	channel (view)	channel[?]<CR>	X=1～4:ch	2: 2ch output 4: 4ch output	View the output channel. (Fixed to 2ch in 7400UCL case)
22	channel (set)	channel=N<CR>	N=2: 2ch output N=4: 4ch output	OK	Set the output channel. (Fixed to 2ch in 7400UCL case)
	EEPROM				
23	Save	save<CR>	Non	OK	Save the setting to EEPROM.
24	Load	load<CR>	Non	OK	Load the setting from EEPROM.
	System				
25	Version	ver<CR>	Non	Version	View the version of microcomputer control program of the camera.
26	Revision	rev<CR>	Non	Revision	View the version of EPGA.
27	Initialize	init<CR>	Non	OK	Load the factory default.
28	config	cfg<CR>	Non	(data output)	View the all current setting data of the camera.

10. Exposure control

Line period exposure (expc=0)
Exposure during each period of EXT.SYNC(CC1)

```
                    ST-1              ST-2              ST-3              ST-4

## 11. Setup steps of Hyper terminal.

[Setup of Hyper terminal]

1) Select "Start"→ "Programs"→"Accessories"→"Communications"→"Hyper Terminal"

2) The windows will appear with the picture below.

3) When the next picture appears, enter any name.(e.g. GMA_RS232C)

    Then click the "OK" button.

4) When the next picture appears, select " COM? " on Connect using.

    (? changes depending on the setting of the computer.)

    Then click the "OK" button.
5)   When the next picture appears, select each items as follows.(9600,8,None,1,Non)

Then click the "OK" button.
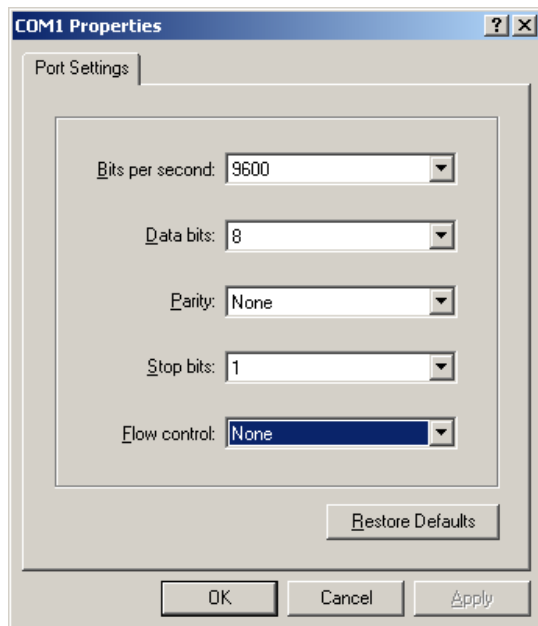

[Communication settings]

Baud Rate   : 9600bps

Data Length   : 8bit

Start Bit   : 1bit

Stop Bit   : 1bit
Parity   : Non
Xon/Xoff Control : Non

6)   The next picture will appear.
7)   Select   [File]→ [Properties]
8) When the next picture appears, select "Settings" tag.

9) When the next picture appears, click the "ASCII Setup" button.

10) When the next picture appears, select each items as follows.(☑, ☑, 0, 0, ☑, blank, blank)
   Then click the "OK" button.

11) The screen display will return to the screen of 9).
    Then click the OK button.

12) End of setup.

    Confirm the connection of the camera ,

    enter "check" on the screen below

    and then send it out.

    If "OK" is displayed on the screen, communication processing has been completed.

13) Select "Start"→ "Programs"→"Accessories"→"Communications"→"Hyper Terminal" →"(* 1) ", when to launch the Hyper terminal again with the same settings after having exited the above screen.

      * 1………The name which was entered at section 3)

11. Notes

Precautions for use

- Do not make an impact on the equipment.
- Do not lag the equipment with heat insulating agent. If the equipment is covered with heat insulating agent, It produces an increase in temperature and it causes the equipment to malfunction.(except for low-temperature environment use)
- Take appropriate measures such as heat removal or cold removal to prevent dew condensation, when to move It to the place where temperature difference is extremely severe. Usage with dew condensation causes the equipment to malfunction.
- When the equipment is not used for a long time, protect the imaging device from dust or scratch by attaching a lens cap. Do not store the equipment at the following places.
    - ・ The place where is subjected to a lot of dust and moisture.
    - ・ The place where is subjected to direct sunlight.
    - ・ The place where is extremely hot or cold.
    - ・ The place in the vicinity of an object which generates intensive electromagnetic field.
    - ・ The place where is subjected to intensive vibration.
- Please wipe off the dirt on the lens surface with a cotton swab preventing scratch to the lens surface. Use a soft cloth to clean up the camera body.
- Use the equipment with a voltage within the range of specifications and do not connect the equipment to a power source that contains intense noise components. In such case, the image output from the camera may contains noise components.
- Do not use the equipment in an environment subject to intense electromagnetic field. In such an environment, malfunction of the camera, disturbance of image and noise are caused by the field.
- In case of the high-intensity object, it may happen that even the low intensity part is displayed whitely like a vertical streak above and below the high-intensity object. This phenomenon is called "smear". However it is the problem specific to CCD and it is not the camera-related failure.
- In case of the linear object, jagged picture may be displayed. Also in case of the pinstripe or checkered pattern, annual rings- like picture may be displayed. However these are also the problem specific to CCD and it is not the camera-related failure.
- The lighting using a commercial power source may cause a perceptible flicker at higher shutter speed. In cases like this, consider to adjust shutter speed setting of the camera or to use the DC lighting or high-frequency lighting.

Attention

- All rights on this manual reserved.
- The specifications and operational details described in the manual are subject to change for performance improvement or other reasons without notice.

12. External dimensions
